

1.6 How we ticket, and what "Done" actually means

i If you don't know what Done means here, you'll think you've finished when you haven't. This is the most common new starter mistake, and it's completely avoidable. I don't want to make silly mistakes like this, so below is what I learnt about what a tick looks like when it's actually done.

First, what is a ticket?

A ticket is a task that's on your board in Jira. Below is a screenshot of a ticket.

Learning objectives

- **Our ticket statuses and what has to be true to move from one to the next**

A ticket's state is the stage of completion it is in. At the moment, I have In Progress and Done. However, Luke showed me his ticket states, and there were many more. For example, when a ticket's coding tasks have all been completed, it will be moved to Coding Done (or something like that). Then it is checked, and if the checks are fine in Coding Done, it moves to QA testing. Then, if quality is fine, it is moved to staging.

- **What makes a ticket you'd be happy to be handed versus one you'd have to go and ask three questions about**

If all the tasks are completed to a satisfactory level and all the tasks that were on the ticket are done, then it is up to the testers to give you feedback. E.g., there are a few comments on your code for improvements or bugs; you would edit these.

NOTE: Because of what Luke showed me, I don't think most of these bullet points will be necessary in the future. I have a basic idea of what to do, but don't really need to know more until I start a proper project.

NOTE: *I probably haven't done this task very well. I could show it to Hamza and see what he says, but I think I understand the basics of tickets.*

Task

Luke showed me his board, explained how it works, and showed me some tickets.

Questions / Queries / Pushback

- **The difference between *Done* and *Released* at Encon — these mean specific things, and they are not the same**
- **What belongs in a ticket, and what belongs in a design spec instead**

I don't really know how to answer them (NOT THAT IMPORTANT; just going to move on from this section).
