

4.4 Finish and demo the Cold Chain Log

- This is where the four weeks come together. It's also the piece of work we'll talk about in your first review, so make it something you're happy to put your name on.

Do

Go through the "How you'll know you're finished" checklist in the *Cold Chain Log* brief and make every line of it true:

- All three screens working against a real deployed API
- In-range readings save as {{ok}}; out-of-range save as {{excursion}} and raise an alert on their own
- Every validation rule returns a 400, demonstrable from Postman
- A duplicate reading returns 409
- Unit tests cover the status rule including its boundaries, and every validation rule
- Tests run before any deploy, and a failing test blocks it
- The whole stack is Terraform with remote state, and destroy-then-rebuild works from one command
- The dead letter queue catches a deliberate handler failure
- The handler is safe if the same message arrives twice
- Loading, error and empty states all show something sensible
- A README someone else can follow

The real test

Find someone else on the team. Give them nothing but your repo link. If they can get a working deployed app without asking you a single question, your README is good enough. If they can't, that's the ticket — fix it and try again.

Then demo it

About 30 minutes at the next sprint review. Show:

- The three screens, used the way a pharmacist would
- An out-of-range reading going in, and the alert appearing on its own
- A couple of validation failures from Postman
- A {{terraform destroy}} and rebuild, if there's time — people like seeing that
- What you found hardest, and what you'd do differently

Done when

- Every line of the checklist is true
- Someone else got it running from your README alone
- You've demoed it

Stuck?

If you're short on time, drop a stretch goal — don't drop the tests or the Terraform. A smaller thing done properly is worth far more here than a bigger thing held together by hand.

Nothing is written here it is just the task that I had to do, I completed both, nothing too really log (could have logged demo and teams reaction but everything went well so I forgot too 😓)
